

hard to fool, easy to use

Honeywell's EasyID™ software plug-in takes the guesswork out of age-verification.

EasyID parses bar code data found on government-issued identification cards—such as driver's licenses—for applications involving age verification or automatic electronic form population. pcAmerica recently introduced new software that integrates seamlessly with the EasyID plug-in. Their enhanced Cash Register Express (CRE) and Restaurant Pro Express (RPE) products now allow operators to quickly and accurately perform age verification in retail or entertainment venues. Both products allow demographic information such as name, address and birth date to be automatically captured for future marketing campaigns. pcAmerica's CRE and RPE point-of-sale systems with age verification functionality are currently compatible with EasyID-enabled MS7580 Genesis™ and MS1690 Focus® scanners.
